PROCESS OPTIMISATION WITH HOT AIR

THERMOCOUPLES

**Generate an air flow**
Powerful, tried-and-tested blowers generate the airflow required for the application.

**Guide the air**
Air ducting systems made of heat-resistant air hoses guide the airflow from the blower to the point of use.

**Heat the air**
Electrically powered air heaters ensure the air is heated to the required temperature.

**Regulate the temperature**
Microprocessor controlled regulators ensure precisely maintained temperatures when hot air is used.

**Apply the hot air**
At the point of use, the hot air is accurately fed through special nozzles for use in the respective application.
